Latest collection with the new LED lamps, Energy Saving lamps and Halogen lamps to suit every occasion

LONGER LIFE **CALEX**[®]
H O L L A N D

Longer Life Calex® Holland

Under the brand name of Calex® Holland Electro Cirkel B.V. has been active for more than 43 years as a specialist in light sources. In particular in the last 20 years we occupied our sales intensively with consumer light sources. In the meanwhile Calex® Holland has earned itself a prominent place on the shelves.

Electro Cirkel has established a network of distributors, above all over the last two decades, both in the area of purchasing and sales. This network spans 40 countries, in Europe and beyond. Considering its unique position in terms of stock, Electro Cirkel is pleased to serve all of his customers and by doing so we cover a wide variety of disciplines.

Due to our experience for over 43 years and our efficient sales department, we can present you with an offer the same day as requested. We are able to fill all your orders, both big and small. Because we work closely with all major transporters, we deliver all over the world. Thanks to our recently expanded warehouse capacity (14,000 m²) and our own logistic department, practically all deliveries will be carried out within 48 hours. **Our customer is always king!!**

Calex[®] on tour 2014

With great pleasure we introduce our Calex stand! Since 2008 we have been presenting Calex Holland at The Lighting Fair, the most prestigious of Europe. Every second year there is an edition held at the Frankfurt Messe. We have been able to let our stand grow with every edition. By the way: our stand is situated at Hall 4.1/F71.

The Light & Building 2014 Fair will be attended by Calex Holland as well. This Fair is being held from Sunday 30th March until Friday 4th April 2014. We will offer a Calex area where all European Calex Distributors and (potential) customers can meet and enjoy the latest innovative novelties of Calex. These novelties include not only LED, but also Halogen, Energy Savers and Special Purpose Bulbs: we can offer a whole range of Calex Light sources.

We are looking forward to show you all these novelties and hope to welcome you at Light & Building 2014 in Frankfurt.

Working to improve the environment

Electro Cirkel is continuously improving to higher standards to be of better assistance to our clients and to ensure a high level of quality and service. As a result we now are ISO9001 and ISO14001 certified. But that's not enough; we want more! At this moment we are also BSCI and AEO certified. More info on the latter two can be found by following the QR codes below or on www.bsci-intl.org and www.macocustoms.com

ISO 9001
ISO14001

BSCI
certificate

AEO
certificate

Expecting to obtain: mid 2014

And that's not where the improvements stop! Electro Cirkel has developed a complete range of LED light sources which produce the same light output with more efficient use of energy than the retiring incandescent lamps. This way Electro Cirkel contributes towards a better environment, helps reducing emissions of CO² and saves the consumer up to 90% of energy costs.

Calex® Halogen

With the introduction of one of the latest members in our wide range of bulbs, we at Calex® Holland are convinced to have found a solution for replacing almost all standard bulbs by a recognizable Energy Saving alternative and with the same CRI of the incandescent lamp.

The Calex® Holland Halogen forms a full range of bulbs, perfectly suitable in all situations where we used to apply our beloved, but "old fashioned" standard bulb. Just like the standard bulb, the Halogen shows the glowing filament and is 100% dimmable. That is why it can perfectly replace all bulbs which are placed in sight, for example chandelier fixtures. The Halogen decreases the energy consumption compared to a standard bulb and will last for over 2.000 hours. Check the images below of the Calex® Holland Energy Saving Halogen Family.

Calex® LED

We are pleased to inform that our successful Calex® Holland LED lamps retrofit range can provide replacements lamps for incandescent lamps up to 75W. Most of our LED range is dimmable. Therefore we can proudly say we have a LED solution for all purposes.

Our company mission

To provide our customers the quality goods they desire, and that with perfect service.

Our company vision

Our mission will be accomplished if delivering high standard quality products has been achieved. We embrace the future and think ahead. Each customer gets a tailor made solution to suit their market demands. Problems will be resolved quickly and professionally. As partners we sail along the waters and with high and taut sail, we sail to the right port!

Our company history

Founded in 1970 by the brothers Van Soelen, the core business of Electro Cirkel B.V. initially was selling electro-technical products to ship chandlers, ship manufacturers and offshore.

In 1987 the company took over California Export (CALEX) in Utrecht and became one of the biggest manufacturers of navigation lamps. Later the Calex factory moved to Schiedam and there produces tailor-made navigation lamps for the marine industry. The production of all the light sources are kept in-house. In 1994 a factory in Latvia, with capacity 25 million units a year, was acquired. This factory was sold in 1997 in favour of teaming up with two factories in Romania, with a combined capacity of 200 million units a year. In 2000 the production was transferred to the Far East. Multiple partnerships with factories over there ensure the production of lamps exclusively for Electro Cirkel B.V.

Succeeded by the second generation of Van Soelen, the company moved to it's current location. It was under their direction that the core business shifted to consumer lighting. In 2012 Rudolf and Angeniek van Soelen have taken over the shares of their cousin. Since then brother and sister are running this family business just like their father conducted the business together with his brother in 1970.

Our company test facilities

To ensure we deliver quality goods, we possess an in-house test centre. This test centre is recently expanded to 4 times it's original size and capacity. It is here where we check our products for lifetime, the wattage, the power factor, the number of on/off switches, light emission and so on. We can check the factory specifications and customer claims and complaints. When valid, we can contact our manufacturer and solve the problem. If not, we can tell our customers how they can improve the use of their products so they can enjoy them at the fullest.

On the left a setup is shown to test colour temperature and lumen output. In the middle you can see the setup for testing the lifetime of the lamps and to check the colour consistency. On the right various switches and dimmers used in the tests are shown.

Out phasing of the Traditional Incandescent Bulb

The European Union has decided to put a ban on the production of traditional incandescent light bulbs, because they are considered to be environmentally harmful on account of their high energy consumption.

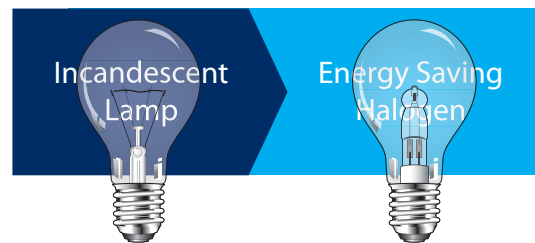

A scheme has been developed by the European Union for the out phasing of the incandescent light bulbs which runs until 2016, as described in the additional*.

Since the 1st of September 2009 the production of all non clear bulbs and all bulbs with a wattage of 100W and higher is no longer allowed. Next step is to forbid the production of the incandescent bulbs with lower wattages. In 2012 the production of all traditional clear incandescent bulbs will be illegal.

Selling the "forbidden" traditional bulbs, or the usage of them, can and will not be forbidden. As long as the bulbs are available from our stock we are able to serve you with the described bulbs. It is no longer allowed to import these bulbs after 1st of September 2009, therefore the traditional bulb will eventually disappear out of our assortment and finally out of our homes.

As a direct replacement for the incandescent light bulbs, there are three options and all designed to use less energy:

- Energy Saving Halogen will save 30% energy;
- Compact Fluorescent Lamps will save 80% energy;
- LED bulbs will even save up to 90% energy.

The described alternatives are proposed by the European Union. With less energy consumption these bulbs will still bring us the same light experience we used to get from our beloved incandescent bulb.

By replacing the "old fashioned" incandescent bulb with the described energy savers, Europe will prevent up to 15 million ton CO2 gassing out annually all over the continent.

Lumen comparison chart - non directional lamps

minimal lumen required to compare with the first column

Incandescent Lamp	CFL	Halogen

Symbols

In this catalogue different symbols are used to show specifications or express special features. The explanation of the symbols used can be found below.

this symbol means the lamp is suitable to be used in sewing machines

this symbol means the lamp is suitable to be used in cooking hoods

this symbol means the lamp is suitable to be used in ovens

this symbol means the lamp is suitable to be used in refrigerators

this symbol means the lamp is intended for use in decorative lights

this symbol means the lamp is not intended for domestic use

this symbol means the lamp is intended for marine use

this symbol means the lamp is intended for industrial use

this symbol indicates the time the lamp needs to reach 60% of its full output

this symbol indicates the number of on/off switches the lamp can manage during its lifetime

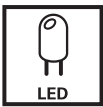

this symbol indicates the lamp is not dimmable

this symbol indicates the lamp is dimmable

this symbol indicates the lifetime of the lamp

this symbol indicates it's a LED lamp

this symbol indicates the amount of Mercury in a CFL lamp

this symbol indicates the lamp has a rapid start-up time
